

Livagra Oral Gel

Description:

Livagra is a breakthrough medicine now available for male erectile dysfunction (ED). ED is also often called impotency or impotence. Chemically, Livagra contains citrate salt of Sildenafil or Sildenafil Citrate. With sexual stimulation, men who have ED will be able to obtain and maintain an erection due to the effects of Livagra.

- Dissolving the gel in your mouth results in faster absorption by the body and a quicker onset of "results".
- The gel is more easily swallowed than tablets and suitable for elderly people or people who have difficulty in swallowing.
- Reduced gastric irritation compared to tablets.

Composition:

Each 5 g contains

Sildenafil citrate

Equivalent to Sildenafil 100 mg

Gel base q.s.

Indication: Erectile dysfunction.

Dosage form: Gel.

Route of administration: Oral.
